Objectives

Goal-oriented and ambitious fresh graduate, with an experience of internship at Machine Intelligence Research Labs, seeking a position to enhance my knowledge about the up-and coming trends in the industry.

I enjoy creative problem solving and getting exposure on multiple projects, and I would excel in the collaborative environment on which your company prides itself.

Education

Pursuing Doctor of Philosophy (Ph.D.) in Computer Science & Engineering from BIT Mesra, with a focus on research and technological advancement.

Garden City University

Master of Science in Information Technology (Data Science, AI/ML/DL & Cloud Computing) (2021-2023)

Technical Skills

- Machine Learning • Quantitative Analysis • SQL Excel
- Statistics & EDA • Generative AI (Exploring)
- Python/Scikit-learn • Cloud Computing • R
- Data Science • Hadoop • Tableau & Power BI
- Data Visualization • Java • Web Development
- Deep Learning • Statistical Analysis

Projects

- **Online Food Ordering System Technology Used:**

Software Resources: Windows/Linux/Mac, PHP, Html, JavaScript, CSS, Notepad++, WAMP/XAMPP/LAMP/MAMP (anyone), My SQL.

Hardware Resources: Pentium, 1.1 GHz, 2 GB RAM, SVGA, Two or three button mouse.

Description: The main purpose of this project is to develop an application which gives provision to the restaurant owner to flourish their business.

- **Simulation of Controlled System for a Mobile Robot Technology Used:**

Resources: MATLAB, R, Statistics, PID, Control System

Description: The aim of this project was to make robots do things that might otherwise be done by intelligent, physical beings. To control a robot in this manner: Defined the state of the robot. Sensed the state of the robot. Compared the state of the robot to a desired state. Decided what actions need to be taken to achieve the desired state and issue the associated commands.

Translated those command into physical action. Measured the effect of those physical actions.

- **Multiclass classification of Red Wine and White Wine**

Algorithms Used: Decision Tree, Navie Bayes, Gradient Boosting, K Neighbors, Random Forest, and Ada Boost.

Description: The fundamental objective of this project is to expand a reliable and correct class model which could successfully become aware of the sort of wine primarily based on its chemical properties.

- **Movie recommendation system**

This is a basic movie recommendation system using collaborative filtering with Singular Value Decomposition (SVD) in Python.

Movie recommendation systems aim to suggest movies to users based on their preferences and behavior, enhancing their viewing experience.

Sales forecasting is the process of estimating future sales based on historical data, market trends, and other relevant information.

Sales forecasting helps businesses anticipate future demand for their products or services. It provides insights into potential revenue, allowing for better resource allocation and planning.

- **Car price detection system**

A car price detection system is a software application or model designed to estimate the price of a car based on various features.

The system aims to provide accurate and reliable estimates of a car's market value, which is useful for both buyers and sellers in making informed decisions.

- **Credit card fraud detection system**

A credit card fraud detection system is a model designed to identify and prevent fraudulent activities related to card transactions.

The system's primary goal is to identify and block unauthorized or fraudulent transactions, protecting both cardholders and financial institutions.

- **Face mask detection using machine learning and OpenCV (Liveness Detection)** A webcam-based face detection system implemented using machine learning.

Facilitating organizations to ensure that someone is wearing a mask or not. Used Live detection techniques to create high-order security.

Technology Used: Python, Data Science, machine learning, OpenCV and artificial intelligence (neural network)

- **Realtime Chat App**

A react-based web application that allows users to chat in real time.

Used Firebase Authentication (SDK) to facilitate authentication & Cloud Firestore to store data.

Technology Used: React js, Firebase, Bootstrap, HTML.

- **Covid-19 Tracker**

Daily and weekly updated statistics tracking the number of COVID-19 cases, recovered, and deaths.

Tracking worldwide cases using google maps and live API stats and datasets. **Technology Used: JavaScript, CSS, HTML, API.**

Professional Experience

Internship (5 Months)

Machine Intelligence Research Labs (Washington, USA)

Research Data Analyst

- Assisting in the collection and preprocessing of data for research projects.
- Implementing and running experiments using appropriate tools and frameworks.
- Conduct comprehensive literature reviews on specific research topics to gain a deep understanding of the existing knowledge.
- After project analysing experimental results or research data using statistical analysis techniques, and data visualization.
- Assisting in the preparation of research papers, reports, and technical documentation. This includes writing sections of papers and proofreading.
- Preparing and delivering presentations on research findings, progress, or specific topics to the research team or at internal meetings.

Full- Time Working (8 Months)

Jain University (Bangalore)

- Assistant Professor in Computer Science Department.
- Developed and delivered undergraduate/postgraduate courses.
- Conducted research in Machine Learning and Data Science field.
- Advised and mentored students on academic and career goals.

- Participated in departmental meetings and contributed to curriculum development and assessment.
- Effective mentorship and leadership abilities in academic settings.
- Ability to manage multiple projects and deadlines effectively.

Cadd Nest As a Computer Science Trainer.

Zenoffi Learning Labb---Learning Labb as a Data Analytics and Data Science Trainer.(2YRS)

- Trained students in Python programming, including data handling with Pandas, NumPy, and exploratory data analysis techniques.
- Delivered hands-on sessions on Data Visualization using Matplotlib, Seaborn, and Power BI/Tableau for analytical reporting.
- Taught SQL for data querying, including joins, subqueries, aggregations, window functions, and real-time project scenarios.
- Guided learners through Machine Learning fundamentals, covering supervised/unsupervised algorithms, model evaluation, and practical implementation.
- Provided project-based training on end-to-end data analysis workflows, including data cleaning, feature engineering, and insights generation.

Certifications

• ACWD Course, Aptech Computer Education	December 2019
• Tableau Desktop Professional, GLANCE LEARNING, IBM Certification	November 2023
• SAS Programming, ED SPARK ACADEMY, IBM Certification	January 2023
• CCA 175 SPARK AND HADOOP, APACHE FOUNDATION, IBM Certification	February 2023
• Virtual Work Experience Program DATA ENGINEER, TAABI	May 2023
